

# Disaster Recovery

with Ancero's Utility VoIP

## Be Prepared

Utility VoIP is flexible, scalable and provides fault tolerance for your business class phone system. When disaster or power failure strikes, Utility VoIP is there to assure the security and functionality of your phone system. Utility VoIP will dramatically reduce your telecommunications down time so that you can reduce your business down time.

## Disaster Planning / Hosted PBX

Unlike the traditional telecom world, when your PBX is down you no longer get calls. Utility VoIP eliminates that issue by putting your PBX in the cloud. By "Call Forwarding" your published numbers to assigned numbers in the Ancero Cloud, we can emulate your existing Auto Attendant and still give your customers the look and feel of doing business as usual.

## Route Calls Remotely

When routing your calls to your mobile device, branch location or a voice mail box, our Hosted service will find your phone and you will still be able to communicate with your customers even if a disaster keeps you from your office.

## 24/7/365 Support

Your phone system is managed 24x7x365 through our state-of-the-art Network Operations Center.

- Future proof your phone system & business
- Easy to use and manage
- Real time recovery
- Stay connected
