

## Desktop as a Service DaaS

Many businesses are searching for a cost-effective, secure and reliable way to provide their distributed end-users access to business applications and corporate data no matter where they work. Desktop-as-a-Service is a fully managed, secure, end user computing platform. DaaS is an innovative solution perfect for businesses looking to transition applications to the cloud while supporting remote work, mobile employees and BYOD environments. Other benefits include easier desktop management, less hardware, simplified IT infrastructure and reduced technology costs. By moving business applications and software to the cloud with DaaS, you are streamlining IT management and expanding the reach of your organization by making your employees more mobile and responsive.

***Ancero Desktop-as-a-Service, or DaaS, offers major benefits for the small business, including easier desktop management, reduced hardware, and increased mobility. It's an ideal choice for companies who want to simplify IT infrastructure and reduce technology costs in the long run***

### MANAGEMENT SERVICES

Manage all desktops, on or off site, from one easy to use portal that can be securely accessed from anywhere. The portal provides centralized desktop control, monitoring and reporting, security insight, centralized updates and many more features. Continuous data backup and synchronization means compliance is now an easier task. Fully managed deployment of software, applications, and updates takes minutes instead of days.

### COST SAVINGS

Traditional computer infrastructures require expensive maintenance and regular upgrades to keep up with changing technology. In fact, a cloud desktop costs 2 times less than a traditional PC due to its longer life, absence of a local hard disk, and reduced power consumption. With a DaaS deployment, you can reuse existing hardware and extend the life of your current technology investment.

### IT FLEXIBILITY

Cloud desktops are implemented and scaled quickly. DaaS lets you buy only the infrastructure and services you need, and then easily add or remove cloud desktops. This reduced complexity and flexibility allows technology to keep pace with your business growth.

### EMPLOYEE MOBILITY

There is growing demand for mobility in the workforce. DaaS supports a "Bring Your Own Device" model. DaaS is compatible with employees' personal laptops and mobile devices, allowing them to securely access work applications and data from anywhere, anytime. Employees can hibernate their cloud desktop at the office, then resume their work at home or a remote site.

### INCREASED SECURITY

Desktop-as-a-Service can provide highly secure remote connections. PCs and hard drives have always been vulnerable, but a cloud desktop cannot serve as a host if it's hacked and viruses can't infiltrate through remote displays. With DaaS, sensitive information is stored in a secure, compliant cloud infrastructure built on enterprise-class hardware. Because sensitive data is never stored on a device, you can rest easy even if a phone or tablet is lost or compromised.

### HIGH PERFORMANCE

The engineered platform is managed 24 x7 ensuring a reliable and productive work environment for your team. Disaster recovery is an inherent part of DaaS since the data centers are supported by redundant power supplies and dependable internet connectivity you are assured consistent uptime.
