Cloud Backup

Data Protection is a robust, multi-layered approach that will maintain your day-to-day operations and prevent downtime. Ongoing employee education and security technology will boost your front line of defense and dramatically decrease the likelihood of any breaches. A solid, reliable cloud-based backup and recovery solution is the second essential layer of defense, allowing businesses to quickly recover if disaster strikes.

Disasters of all types cause damaging downtime; fires, floods, fraud, ransomware, cyber-attacks, power or IT system failure and human error.

Ancero will assess your IT needs, beginning with a high-level design phase to determine your continuity objectives. We'll architect and implement complete protection, recovery plans, cloud backup, and Managed IT services for businesses of any size, efficiently and cost effectively, including virtualization, email security, AV and cloud storage solutions utilizing our industry leading technology partners.

Our Data Protection Solutions

Microsoft Azure Cloud Backup & Recovery
Azure cloud backup and recovery is a simple, cost-effective, highly secure and seamless solution built into the platform.

Datto BDR Appliance with Cloud Recovery
Data continuity solutions offer automated local backup on robust hardware purpose-built for data protection and replication to a secure cloud.

Desktop Backup Continuity
Datto Cloud Continuity is a reliable, image based, all-in-one BCDR solution that provides cloud backup, screen shot verification, restore and virtualization of the entire device.

SaaS Protection
Cloud-to-cloud backup and recovery solution for software-as-a-service applications Office 365 and G Suite to ensure data isn't lost to end-user deletions, viruses, malicious activity or departing employees.

Email Security & Archiving
Mimecast email security protection against business email compromise, phishing, spam, viruses, malicious URLs and attachments, with flexible, affordable subscription pricing.

Our Data Security Solutions

Anti-Virus & DNS Web Filtering Protection
Webroot offers cloud-based end point protection that stops threats in real time and secures businesses and individuals wherever they connect.

Firewall Technologies
SonicWall next-generation firewalls provide the security, control and visibility you need to maintain an effective cybersecurity posture.

Cybersecurity Solutions
Recognizing the growing need for additional cybersecurity capabilities, Ancero partners with a select group of security vendors to offer a broad range of solutions in this complex, specialized space.

Cyber Awareness Training
Human error remains the leading contributing cause of the majority of all security breaches. Cybersecurity Awareness Training is the most effective preventative tactic.

Penetration Testing
The process of testing a network, application, or security policy to identify vulnerabilities, expose your entire attack surface, and predict future attacks.
